EVENT

Research Coordinator Education Program iConnect Training Webinar

Thursday, July 29th, from 9:00 - 10:30 am

[Register for training >](#)

You're invited!

Join us for the iConnect Training Webiner to learn about the new features available in the All IN for Health iConnect system—the clinical study listing and research volunteer registry platform designed for researchers.

If you are unable to join us for the session on July 29th, you can select an alternate date during your registration.

New iConnect features

► Reach registry volunteers directly

To facilitate higher volumes of connections to registrants, study teams will now be able to perform email outreach directly to anonymized registry volunteers who match to their study.

► More comprehensive filtering

Study teams can view study specific match results from the dashboard and proceed to apply additional filters or initiate the outreach to the matched profiles.

► Track volunteer outreach

Each outreach message sent to volunteers generates a trackable recruitment campaign to provide real time insight into the success of the outreach.

► New questions on volunteer form

Several new questions related to COVID-19 have been added to the volunteer registration form.

► Improved password complexity

The password complexity requirements for account login have been enhanced, providing greater security for all user types.

► ReCaptcha enabled

The reCaptcha security feature is now enabled on the “Contact Research Team” forms for all users, including volunteers.

▶ **Amended legal auth language**

The language has been updated for a person who creates an account for “someone else, as their caregiver.”

▶ **Updated security measures**

iConnect cloud infrastructure now specifies and operates within a more secure virtual private cloud (VPC) network.

▶ **Investigators profile pictures**

Investigators can upload profile pictures from the Dashboard to improve the patient experience.

▶ **Enhanced My Referrals tracking**

On participants' Referral View page, the Notes section now updates the name of the user who updates it, along with the date and time of the update.
