

Topic: List and Complete a Study Drug in Patient's Medication History in PowerChart

Facility: IU Health

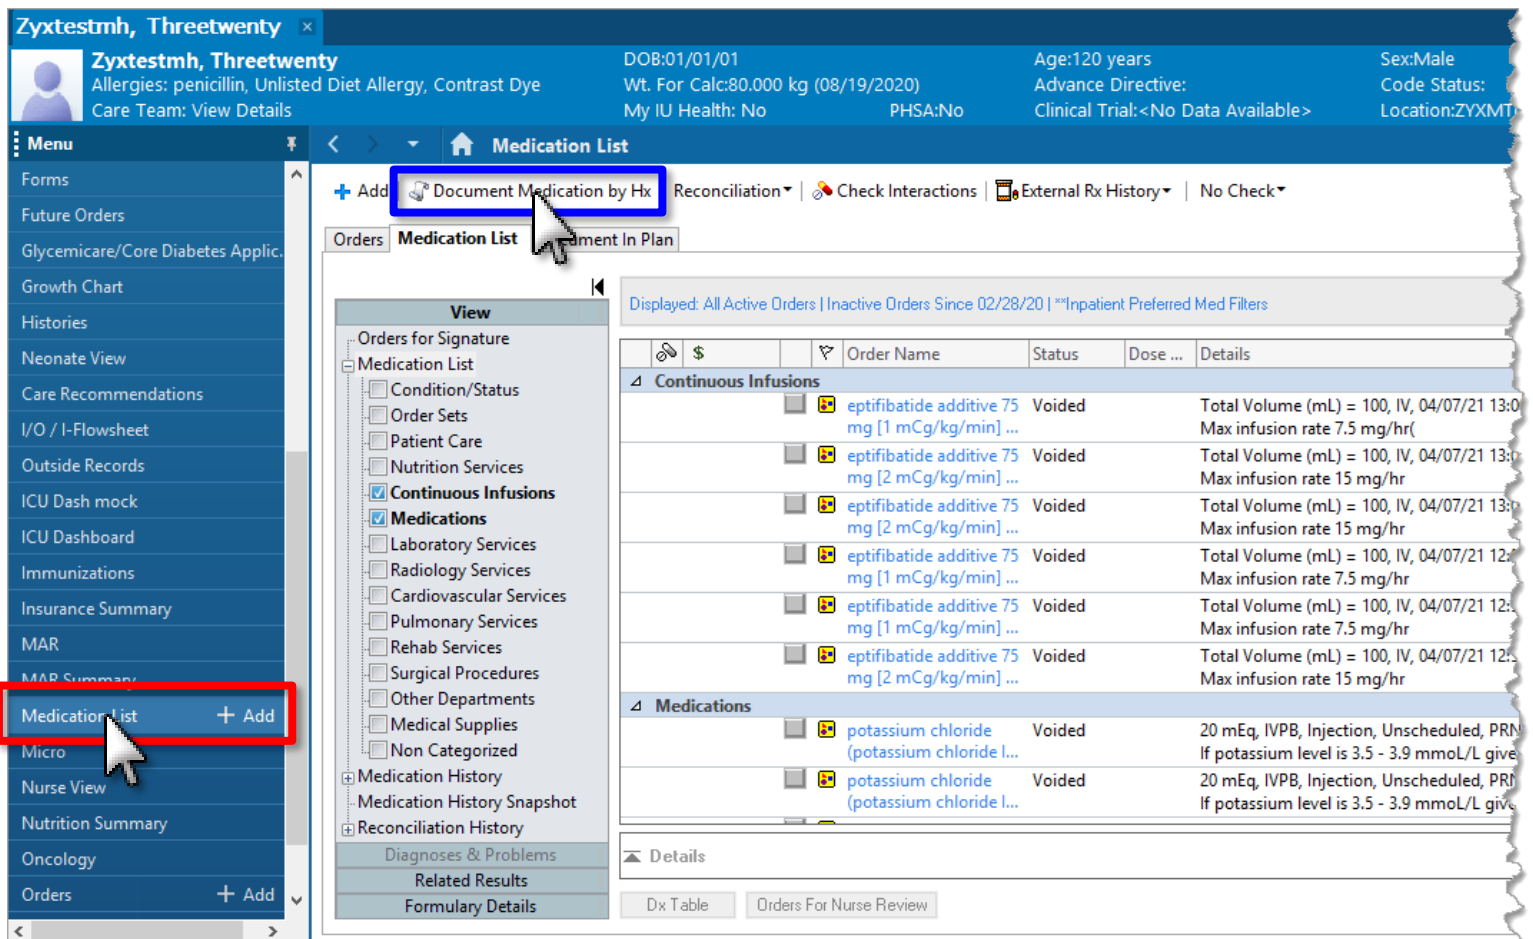

Audience: Researchers

What: Education for research staff on how to enter study medications into a patient's medication history.

Why: To ensure all clinicians with Cerner access can see that a patient has taken or is taking a study medication.

List a Study Drug

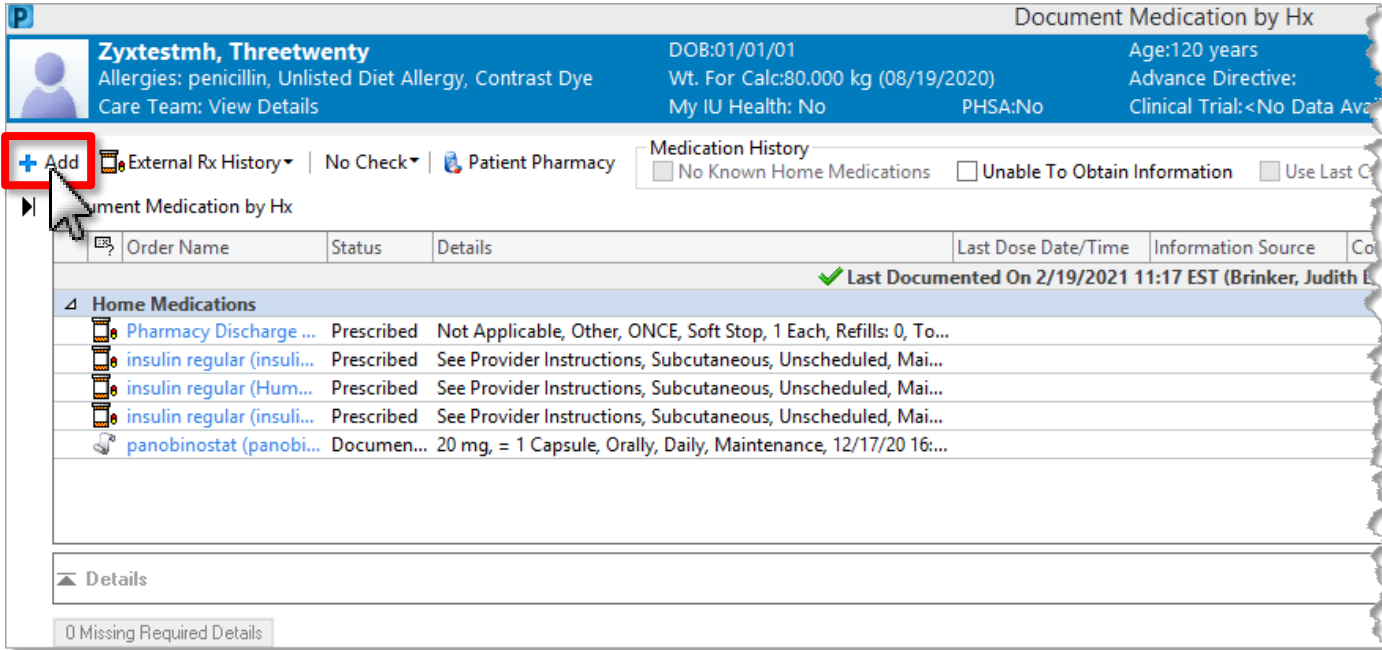

From the patient's open chart in PowerChart...

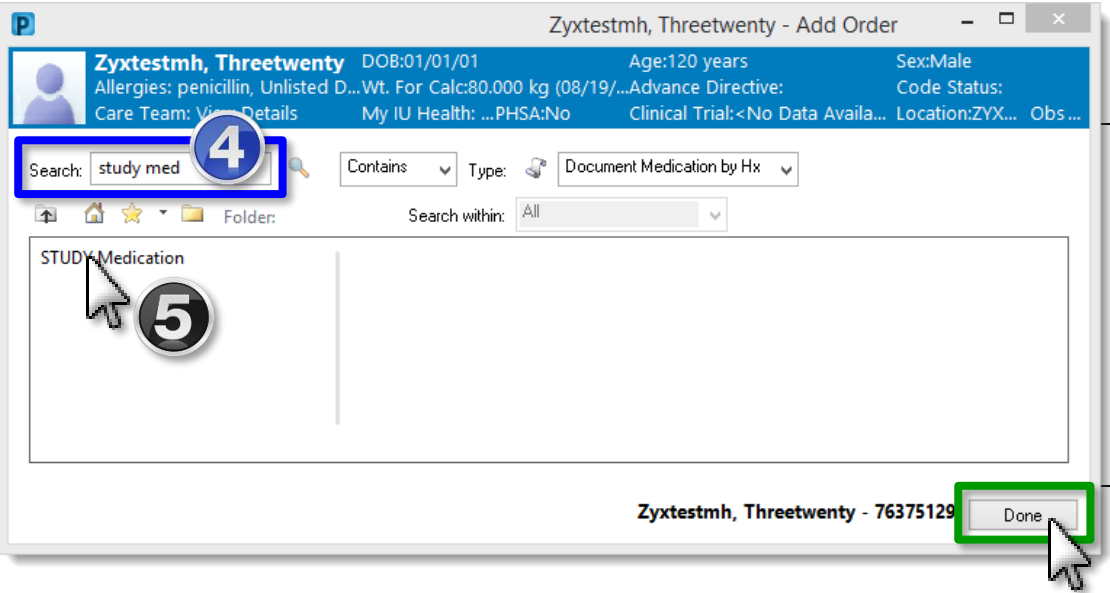

Step	Action
1	Click the Medication List band.
2	Click the Document Medication by Hx button. <i>The Document Medication by Hx dialog box displays (screen shot, next page).</i>

Continued on next page

Step	Action
3	<p>Click the Add button.</p> <p><i>The Add Order dialog box displays.</i></p> 
4	<p>Enter “study med” in the Search field.</p>
5	<p>Select the STUDY Medication option.</p>
6	<p>Click the Done button.</p>

Continued on next page

Step

Action

6
continued

The Add Order dialog box closes, revealing the **STUDY Medication** selected (highlighted in blue), under the **Pending Home Medications** section.

7

Complete the applicable fields in the **Details** section:

- Dose
- Route of Administration
- Frequency
- Description (of Orderable - if blinded randomized study drug, Enter “name of study drug/Placebo”)
- IU IRB #
- Special instructions, if applicable
- Additional comments may be added in the Order Comments tab, if necessary.

8

Click the **Document History** button.
*The **STUDY Medication** entry is now listed in the patient's Medication List.*

Continued on next page

Document STUDY Medication as "Completed" (when patient is no longer taking medication)

From the patient's open chart in PowerChart...

Step	Action
1	Click the Medication List band.
2	Click the Document Medication by Hx button. <i>The Document Medication by Hx dialog box displays (screen shot, next page).</i>
