Dr. Haas named Medical Director for Statewide Clinical Research Network

News from the ICBI: Open House - May 17th

Clinical research billing compliance training

The OCR has scheduled an educational presentation on the Indiana University & IU Health OnCore Research Billing Notification process and other clinical research billing compliance requirements. We will review study team roles and responsibilities as well as resources available to you.

There will be time for Q&A. This presentation should be considered required training for anyone in a study coordinator role and will likely provide new information even for those actively using these processes.

Two training dates have been scheduled. These will be identical presentations. To register for this training, please click on the registration link below that fits your schedule.

Thursday, June 23rd, 10:00 - 11:30 am

Monday, July 11th, 1:00 - 2:30 pm
Coverage analysis team is hiring!

The OCR is currently taking applications for a Coverage Analysis Position. Previous clinical research experience is not required, but preferred. This role is responsible for working with study teams, and other team members to review all human subject research studies for compliance with applicable federal, state and local laws related to clinical research billing.

If you, or someone you know, are interested in learning more about this position, click the link below to apply.

OnCore reports & search tools

Both standard reports and robust search tools are available within the OnCore application for users to extract information as needed.

OnCore provides an informatics infrastructure that includes a full range of operational components and data elements to assist in providing study teams, compliance staff, and research leaders with the clinical research data under their purview. For more information on using this functionality and a list of useful reports, please visit our OCR website.
Dr. Haas named Medical Director for Statewide Clinical Research Network

The Medical Director for the Statewide Clinical Research Network (SCRN) is a CTSI position that is now part of CTSI 4.0. Dr. David Haas will work closely with the Statewide Program Director in implementing the strategic vision and plan for achieving statewide research connectivity for studies and investigators.

He will also serve on the CTSI OCR Advisory Committee. His expected roles and duties include the following:

- Collaborative leadership of the SCRN in achieving its goal of establishing a single access point for investigators to open inpatient and outpatient clinical research sites throughout the state of Indiana.

- Aid in development of the Recruitment Concierge Service to provide a single contact for investigators to develop successful recruitment plans and feasibility assessment. Collaborate with these groups on prioritization of statewide projects.

- Work with IUH and other facility CMOs in setting up research endeavors. This will involve 1-2 new IUH facilities per year and will focus on locations with IUSM satellite campuses.

- Work with CTSI OCR Business Office in budget planning and management, strategic planning, and grant proposals for activities within the SCRN.

The SCRN vision is that any investigator or sponsor will have a “1-stop shop” to be able to implement studies within a statewide network, enabling a diverse population to be studied. This includes planned representation from rural areas of the state, which will position investigators and the CTSI to compete for and complete impactful research to improve health within Indiana. Partnering with health systems throughout the state, harmonizing and streamlining processes, and providing guidance and mentorship for investigative teams are part of what Dr. Haas feels are keys to the success of this endeavor.
Last month, the Indiana Center for Biomedical Innovation (ICBI) reacquainted invited guests to the facilities and services of the biomedical business incubator. This incubator helps life sciences entrepreneurs to bring their discoveries to market—and to patient care.

"ICBI is a one-of-a-kind partnership among the IU School of Medicine, the Indiana Clinical and Translational Sciences Institute, and IU Health that supports translational science in medicine—meaning that investigators can take medical device or small molecule drug discovery ideas from their inception and develop not only the technologies, but also the business to commercialize the discovery and really drive the paradigm from bench to bedside.

We are uniquely designed and positioned to aid those entrepreneurial-minded researchers."

AARON VIGIL-MARTINEZ
ICBI Director
The Open House provided an in-person networking opportunity for member companies, researchers, partners, and innovation experts to mingle and connect in a way that hasn’t been possible in the last few years.

For IU and IU Health researchers who are thinking about stepping their toes into the entrepreneurial pool, the ICBI is conveniently located on the IU Health Methodist Hospital campus on the 5th floor of the Noyes Pavilion. This year’s Open House may be over, but bioscience researchers are always welcome to tour the facilities and explore the possibilities.
