

Multicenter

The Multicenter team at IU has been in place since 2015 with a growing team of project managers. We act as the CRO for your trials that you would like to open at other locations both within Indiana and nationally. We manage protocols from study start-up to study close out using our experience and knowledge to navigate this ever-changing world of research.

Our team has years of experience managing all trial types, from low-risk correlative studies to high-risk phase 1 dose escalations, including those with INDs. We currently manage over 20 different sites including IU Health Hospitals. All Multicenter Project Managers stay up to date on the latest federal and local regulations to ensure strict compliance across all studies.

IUSCCC Multicenter Team

The Multicenter Team is the infrastructure over-seeing project management and regulatory compliance for investigator-initiated trials opened at sites outside of IUSCCC where IUSCCC is the lead site

Services

- Study start-up which includes document creation, EDC set-up, contract/agreement logistics, preparation and conduct of SIVs, training, and all start-up procedures with outside sites.
- Study maintenance which includes, safety reporting and management, monitoring, central eligibility review, ongoing regulatory and compliance monitoring, IRB management, correlative sample logistics, and management of all outside sites.
- Study close-out which includes assistance with manuscripts, documents coordination with final analysis, and close out procedures at all sites.

Cost

Our cost is minimal compared to typical CROs as our goal is to provide support to Indiana University and its PIs. Our cost structure can be sent upon request. If low or no funding is available, the option to apply for the CTO Support Grant can be discussed. Our team of experts can walk you through either process.
